**Re: Application for Penetration Testing / Ethical Hacking Roles**

Dear Hiring Manager,

I am writing to express my interest in entry-level to junior roles in penetration testing, ethical hacking, or cybersecurity. With a strong foundation in Cybersecurity and IT Engineering, I am passionate about identifying vulnerabilities, improving security posture, and contributing to organizations that value proactive defense and continuous improvement.

I hold two formal IT qualifications. The first is a Cybersecurity Bootcamp Certificate, where I completed a six-month intensive program focused on Python for defensive programming, web development, penetration testing, ethical hacking, and digital forensics. The second is an IT Engineering certification covering CompTIA A+, Network+, Server+, Security+, and Cisco CCNA, providing me with a solid understanding of networking, systems, troubleshooting, and information security fundamentals.

During my cybersecurity training, I gained hands-on experience through real-world simulations and practical labs. This included working with common security tools, automating tasks using Python, performing vulnerability assessments, and analyzing weaknesses in controlled environments. I continue to strengthen my skills through daily practice on platforms such as TryHackMe and Hack The Box, focusing on web application security, networking, and privilege escalation techniques.

I also maintain an active GitHub portfolio where I document and showcase security-related projects, scripts, and learning progress, alongside a personal portfolio website that highlights my technical journey and interests in cybersecurity and penetration testing.

In my current role as a Cash Device Monitoring and Troubleshooting Agent, I monitor and troubleshoot ATM and coin device issues, analyze faults, log incidents, and collaborate with support teams to ensure service availability. This role has strengthened my analytical thinking, attention to detail, and ability to work under pressure — all of which are essential skills in security operations and penetration testing environments.

I am highly motivated, security-driven, and committed to continuous learning. I am eager to apply my technical skills in a professional cybersecurity environment where I can grow, contribute value, and develop into a skilled penetration tester or security professional.

Thank you for taking the time to review my profile. I would welcome the opportunity to discuss how my skills, curiosity, and dedication to cybersecurity can support your organization's security objectives.

Warm regards,

**Sandiso Mayekiso**
