

Sandiso Mayekiso

Junior Cybersecurity and Penetration Testing Candidate

Cape Town, South Africa | 065 857 1926 | mayekisosandiso@gmail.com

[Portfolio](#) | [LinkedIn](#) | [GitHub](#)

Professional Summary

Cybersecurity and technical-support professional with nearly three years of experience troubleshooting cash-device incidents in a banking environment. Completed the HyperionDev Cybersecurity Bootcamp with a 97% overall average and built practical skills through authorised labs covering network enumeration, vulnerability assessment, web application testing, exploitation, privilege escalation and security analysis. Currently preparing for CompTIA PenTest+ and seeking a junior cybersecurity, vulnerability management, SOC or penetration-testing opportunity.

Technical Skills

Security testing Reconnaissance, enumeration, vulnerability scanning, web application testing, exploit validation, privilege escalation and technical reporting

Tools Nmap, Burp Suite, Metasploit, Nessus, Wireshark, Splunk SIEM, Kali Linux and Git/GitHub

Systems and networks Linux, Windows, Windows Server lab administration, Active Directory fundamentals, TCP/IP, DNS, firewalls and VMware

Scripting and development Python, Bash, SQL/SQLite, HTML, CSS, JavaScript and Firebase fundamentals

Professional Experience

Agent Monitoring Cash Devices | Capitec Bank Limited

Oct 2023 - Present | Cape Town

- Monitor and troubleshoot ATM and coin-machine incidents to support device availability and branch operations.
- Assess reported symptoms, perform first-line troubleshooting and escalate unresolved incidents to second-line support with clear technical context.
- Coordinate with branches and support teams, communicate progress and record the actions taken to support efficient incident resolution.
- Manage multiple time-sensitive faults while maintaining service quality, accuracy and professional communication.
- Apply structured problem solving to identify likely causes, test practical solutions and verify whether service has been restored.

Cybersecurity Projects

Web Application Security Labs | Independent Practice

2025 - Present

- Tested intentionally vulnerable applications, including OWASP Juice Shop and a Flask, SQLite and Jinja2 lab, for SQL injection and cross-site scripting in controlled environments.
- Used Burp Suite and browser developer tools to inspect requests and responses, validate vulnerable inputs and document practical remediation steps.

Network and Host Exploitation Labs | Independent Practice

2025 - Present

- Performed authorised reconnaissance and enumeration with Nmap, vulnerability validation, reverse-shell exercises and Linux privilege escalation against lab targets such as Metasploitable and Mr Robot CTF.
- Recorded findings, attack paths and mitigation recommendations in structured lab notes and portfolio write-ups.

Cybersecurity Projects Continued

Traffic and Security Monitoring Practice | Independent Practice

2025 - Present

- Used Wireshark display filters to inspect packet captures and practise interpreting network conversations, protocols and suspicious traffic patterns.
- Completed introductory Splunk SIEM exercises focused on searching events, reviewing logs and understanding how monitoring supports investigation.

CWS Academy | Independent Web Project

2026 - Present

- Developing a cybersecurity learning platform with structured courses, protected student access, assessments and progress tracking.
- Used HTML, CSS, JavaScript, Firebase Authentication and Firestore while applying secure-design considerations to access control and private course content.

Education and Training

CompTIA PenTest Plus Distance Learning | College SA and Optimi

2026 - Present

Current exam-preparation training in penetration-testing methodology, vulnerability assessment, attacks and exploits, reporting and remediation.

Cybersecurity Bootcamp Certificate | HyperionDev

Jan 2025 - Jun 2025 | Cape Town

Completed practical training in Python, network and web security, penetration testing and ethical hacking. Achieved a 97% overall task average.

IT Engineering Certificate of Completion | College SA and Optimi College

Jan 2024 - Oct 2024

Completed training aligned with CompTIA A+, Network+, Server+ and Security+ concepts, together with Cisco CCNA networking concepts.

Business Management NQF Level 5 | College of Cape Town

Jan 2015 - Jun 2016

Coursework included business management, sales management, public relations and cost and management accounting.

Practical Learning

TryHackMe learning paths Pre Security, Web Fundamentals, Cyber Security 101 and Junior Penetration Tester

Practice areas Reconnaissance, enumeration, vulnerability assessment, web exploitation, Linux privilege escalation and security reporting

Professional Strengths

Analytical troubleshooting | Incident communication | Customer service | Documentation | Adaptability | Continuous learning
